PROJECTS

Memory Matching Card Game 🔗
Technologies used: HTML, CSS, JavaScript, JSON, DOM Manipulation
- Created a fun card matching game, Implemented card logic to flip two cards at a time, check for matches, and keep matched cards visible.
- Included features like a card shuffling, matching pairs, countdown timer, score tracking, sound effects, and card data loading from a JSON file. Cards are shuffled randomly each game to ensure a new experience every time.

Let's ChatApp with Firebase 🔗
Technologies used: React.js, Sass(CSS pre-processor), Firebase

- Let's ChatAPP is a real-time chat application built using React.js for the front end and Firebase for the back end. It utilizes Firebase Authentication for user registration and login.
- It allows users to register, login, search for other users, initiate chats, send messages, and clear chat history. The application provides a seamless chatting experience, making communication easy and efficient.

VeriRate - Employee Management Dashboard
Technologies used: React.js, Tailwind CSS, Node.js, Express.js, PostgreSQL

- Enable companies to store and manage employee data, rate performance, verify backgrounds, and handle blacklisting.
- Employee Data Management: Allows HR and managers to add, edit, and organize employee records, including personal details, roles, and performance metrics.
- Role-Based Access Control: Ensures secure access by implementing different permission levels for admins, managers, and employees
